

**PL-100: Microsoft Power Platform App Maker**  
As of 15 March 2023

Design business solutions (20–25%)	
Create a high-level design	
1	Identify existing data sources needed to support a business solution
2	Describe the expected user experience for targeted devices and describe the differences between Microsoft Power Platform app types
2a	Describe the expected logic and steps that a process will execute
3	Create a high-level structure for a new data source
Identify Microsoft Power Platform components	
4	Determine the required Microsoft Power Apps app type for a business solution
5	Determine when to use Microsoft Dataverse for Teams
6	Map a problem domain to Microsoft Power Platform tools
7	Identify options for implementing business logic
8	Describe connectors
9	Describe uses cases for cloud flows and desktop flows
10	Describe use cases for chatbots
Design the user interface (UI) for a business solution	
11	Identify opportunities for component reuse
12	Select UI elements for canvas apps
13	Identify the model-driven forms and Dataverse views that are needed
Design reporting and visualizations for business solutions	
14	Select reporting options for business solutions including views, Microsoft Power BI visualizations, and dashboards
15	Define visualizations for Power BI dashboards
16	Define visualizations for model-driven dashboards
17	Define visualizations for canvas apps
Create business solutions (60–65%)	
Manage Microsoft Power Platform components during development	
17a	Create a publisher in Dataverse
18	Create a Dataverse solution
19	Export or import a Dataverse solution
20	Export or import a canvas app or a cloud flow
21	Add existing apps and flows to a Dataverse solution
Create model-driven apps	
22	Create model-driven apps
23	Create and configure Dataverse table forms
24	Create and configure Dataverse table views
25	Share model-driven apps with other users and groups
26	Create and configure model-driven dashboards

**PL-100: Microsoft Power Platform App Maker**  
As of 15 March 2023

	<b>Create and manage canvas apps</b>
27	Connect to data sources in canvas apps
28	Interpret App checker results
29	Manage versions of canvas apps
30	Publish canvas apps
31	Share canvas apps with other users and groups
32	Build canvas apps screens
33	Add canvas app assets and components to screens
	<b>Create screens for canvas apps</b>
34	Determine when to use forms, galleries, button, labels, input controls, images, and custom controls
35	Configure UI elements
36	Implement Power Fx formulas
37	Implement collections and variables
38	Run a cloud flow from a canvas app
	<b>Configure Microsoft Dataverse</b>
39	Create tables and table columns based on a data model
40	Link tables by using lookups
41	Describe use cases and capabilities of business rules
42	Create Dataverse business rules
43	Describe how Dataverse uses role-based access control (RBAC)
44	Add table permissions to existing Dataverse security roles
	<b>Create Power Automate flows</b>
45	Describe types of triggers for cloud flows
46	Create cloud flows
47	Configure triggers for cloud flows
48	Configure flow actions
49	Test a cloud flow and interpret flow checker results
50	Implement conditional logic for a cloud flow
51	Create approvals and monitor the approval process by using Power Automate and Microsoft Teams
52	Share cloud flows
53	Create a desktop flow for personal use
	<b>Create Microsoft Power Virtual Agents chatbots in Microsoft Teams</b>
54	Identify use cases and capabilities for chatbots
55	Create a chatbot that uses topics and trigger phrases
56	Test a chatbot
57	Publish a chatbot

**PL-100: Microsoft Power Platform App Maker**  
As of 15 March 2023

Analyze and visualize data (10–15%)

Create and consume Power BI dashboards

- 58 Create a simple report from an existing dataset by using Power BI Service
- 59 Create Power BI dashboards from existing reports
- 60 [Not used]
- 61 Embed Power BI dashboards and tiles in canvas apps and model-driven apps
- 62 Share Power BI dashboards

Describe AI Builder models

- 63 Describe use cases for AI Builder
- 64 Describe differences between prebuilt models and custom models
- 65 Describe the process for training custom models
- 66 Use a model from within Microsoft Power Automate or Microsoft Power Apps
